

1) Business Description (50 words)

Pollity, an AI-powered Chief of Staff, provides data-driven governance tools to India's 3 million+ elected representatives. It transforms the ineffective grievance management, inter-agency coordination, legislative research, social media management, and decision-support systems, into data-driven governance engines, thereby enabling year-round effective service to constituencies, while enhancing transparent and accountable public service.

2) Problem this business is addressing (125 words)

India's democracy faces a critical capacity deficit. An average MP represents 2.5 million citizens without any institutional support to service hundreds of grievances daily. As per estimates, grievance volumes on government portals have increased 10-fold from 200,000 (2014) to 2.9 million (2024). Newly elected MPs/MLAs swamped with constituents, directly affecting their legislative effectiveness. Most of the grievances are resolved by influence rather than a data-driven process (citizen satisfaction remains at 43-62%). Furthermore, significant development funds (like MPLADS/MLALADS) remain unutilized due to poor tracking and decision-support. The existing tools are either bureaucratic "Systems of Record" excluding representatives or "Election Tech" focused on winning votes or "Expensive and Inaccessible" political consultancies. No tool helps representatives govern effectively during their term, leading to administrative paralysis and voter dissatisfaction.

3) Social Impact of Business (125 words)

Pollity's social impact is grounded in *"efficiency as equity"*, creating measurable social impact through *improved democratic responsiveness*. The direct impacts include: reduced grievance resolution time (target: 50% reduction); improved citizen satisfaction from 43-62% to 75%+; enhanced transparency in development fund utilization (\$8-10 billion annually); strengthened accountability through tracking of representative responsiveness.

Theory of Change:

Better-equipped representatives → faster grievance resolution → increased citizen trust → functioning policy feedback loops → improved governance outcomes.

Moreover, the freemium panchayat tier extends the impact to rural India's 2.5 million+ village heads, *democratizing access to governance technology* regardless of budget constraints. Ultimately, Pollity bridges the gap between citizens and the state, restoring trust in democratic institutions and ensuring that the *"last mile delivery"* of governance actually reaches the beneficiary.

4) Customer/Beneficiary segment this business is addressing (125 words)

Customers/Users:

The primary *paying* customers are the 5,000+ *high-value* elected representatives (MPs, MLAs, MLCs) and ~85,000 Municipal Councilors. These representatives have statutory *office expense allowances* that can fund the subscription. We will also provide freemium services to the 2.5 million+ Panchayat Sarpanches (village heads).

Beneficiaries:

The *ultimate beneficiaries* are the 1.4 billion Indian citizens. By making their representative more efficient, citizens receive faster service delivery, better infrastructure, and more transparent and responsive governance. We specifically target the "*missing middle*" of governance: the MLA/Corporator/Councillor level, where the volume of citizen interaction is highest but institutional capacity is lowest.

5) Potential Market Size (125 words)

Total Addressable Market (TAM): \$78.6 million (**₹7070 million**) annually at full penetration across India's 3.3 million elected representatives.

Breakdown by tier:

- MPs (788): \$2.35M at \$249/month
- MLAs (4,550): \$8.14M at \$149/month
- Councillors (90,000): \$52.9M at \$49/month
- Panchayat Freemium/Paid Tier (253,000): \$15.2M at (*freemium* or \$5/month)

Serviceable Addressable Market (SAM): \$11.64 million (**₹1050 million**) with realistic 10-25% penetration within five years.

Year 3 Target (SOM): \$2.57 million ARR (**₹230 million**) from 8,250 paying customers plus 75,000 freemium users. Municipal Councillors drive 68.5% of revenue, validating the urban-first strategy. The market opportunity is validated by a prominent political consulting firm I-PAC's ₹2090 million revenue (FY24) serving the same customer base through expensive consulting engagements.

6) Competing or substitutable products (125 words)

- Political Party Apps:** NaMo App (10M+ downloads) provides volunteer coordination and content dissemination; Congress Shakti suffered catastrophic failure (75-80% bogus registrations). Both focus exclusively on campaigns (with no year-round governance functionality).
- Niche Apps (Neta App, Sarpanch Samvad):** Often failed due to lack of sustainable revenue models or reliance on ads.
- Government Platforms:** MyGov (47M users), CPGRAMS, and UMANG serve citizens, not representatives. These bureaucrat-facing tools that ignore the politician's need for *personalized credit-claiming* and *constituent relationship management*. No productivity tools exist for elected officials managing constituent relationships.
- Political Consultants (I-PAC, etc.):** High-cost, manpower-intensive services focused on elections, not governance.

Moreover, a critical whitespace exists for governance-focused representative tools that complements rather than competes with campaign infrastructure, serving *daily* the 4.5 years between elections that existing solutions ignore.

7) Why is this the right team to launch this business? (125 words)

Manav Mutneja (Co-Founder, CEO) combines 7+ years of government experience (Sports Authority of India, Delhi Assembly Research Centre), policy expertise (MPP candidate at UChicago Harris School of Public Policy), and building central operations for a health-tech eldercare social venture (Elcare India).

Noorul Qausain (Co-Founder, Head of Partnerships) brings direct political operations experience: Political Consultant managing 100-member campaign teams, former I-PAC Media Analyst, and Delhi Assembly Research Centre Fellow where he built digital networks connecting 100,000+ constituents and provided legislative advisory.

Together: *policy expertise meets political operations*: the combination needed to understand what technology to build that the representatives will actually adopt.

8) Key Milestones or Estimated time to market? (125 words)

Q3-Q4 2026: MVP launch and beta testing with 50 representatives in Delhi and Maharashtra. Validate core grievance management and communication features. Success metric: NPS >40.

Q1-Q2 2027: Commercial launch; scale across Maharashtra (BMC, Pune, Nagpur corporations) and Delhi; close seed funding (\$300-500K). Target: 500 paying customers.

2028: Punjab and Uttar Pradesh expansion; secure first party-level bulk deal; Series A (\$2-3M). Target: 3,000 customers, \$1M ARR.

2029: Southern states rollout (Tamil Nadu, Karnataka, Kerala); MP tier focus; GeM registration for government procurement. Target: 8,000 customers, \$2.5M ARR.

2030: National scale; government procurement contracts activated; Series B (\$8-10M). Target: 25,000+ customers, \$7M+ ARR.

Current Status: Product development phase; website live (pollity.in); actively seeking beta testers among interested public representatives (Q1-Q2 2026).
