

POLLITY

Building India's Last Mile of Digital Governance

Feasibility Summary

Social New Venture Challenge 2026

University of Chicago Booth School of Business

February 2026

Prepared by: Manav Mutneja

University of Chicago Harris School of Public Policy

1. Executive Summary

Pollity is a digital governance platform serving as the "Digital Chief of Staff" for India's 3.3 million elected representatives. The platform provides constituent grievance management, government agency coordination, legislative research, social media management, and decision-support analytics, enabling representatives to serve constituencies more effectively year-round.

India's democratic infrastructure faces a critical capacity crisis. Each Lok Sabha MP represents 2.5 million constituents – 35 times more than British MPs – while managing \$8–11 billion in combined development funds annually across all representative tiers. No purpose-built technology exists for year-round governance, creating a massive opportunity for GovTech innovation.

2. Problem Statement

According to a World Bank analysis, India's CPGRAMS is one of the largest grievance redress systems globally, handling over 11.2 million grievances between 2019 and 2024. Yet most systems prioritize administrative processes over user-friendliness, using complex forms and rigid categories that make access difficult. The government reduced grievance resolution timelines from 30 to 21 days in August 2024, but representatives lack the tools to meet these targets.

Grievance volumes increased 10-fold from 200,000 (2014) to 2.9 million (2024), yet citizen satisfaction remains at just 43–62%. Newly elected MLAs report being "swamped" with constituents arriving "early morning until late at night." Furthermore, significant development funds (such as MPLADS/MLALADS, totalling \$8–10 billion annually) remain underutilized due to poor tracking and decision-support analysis. Audits reveal that MPs often leave 20–30% of development funds unspent due to poor tracking. Interviews with MLAs confirm they rely on chaotic WhatsApp groups, registers, Excel sheets, and paper slips, losing critical voter data due to a lack of data protection systems.

The core problem: no purpose-built technology exists for year-round governance.

3. Solution: The Digital Chief of Staff

Pollity delivers a comprehensive governance management platform with six core service areas:

#	Service	Description
1	Grievance Management	Intake, categorization, and tracking of constituent grievances with automated follow-ups and resolution workflows.
2	Operations Support	Constituency office management, staff coordination, event planning, public office support, and day-to-day governance assistance.
3	Agency Coordination	Streamlined communication with government departments, automated status tracking, and intelligent escalation management.
4	Constituency Engagement	Constituency insights, demographic trends, social media analytics, and reputation monitoring across social media platforms.
5	Research & Analysis	Socio-political research, legislative analysis, parliamentary procedure support, policy briefings, legal advisory, and risk assessment.
6	Public Finance	Tracking and managing annual local area development funds, budget analysis, scheme utilization tracking, and fiscal advisory.

These services are delivered through four intelligent platform agents:

Agent	Type	Function
Jan-Sunwai	Grievance Resolution Agent	Omnichannel citizen complaint aggregation, auto-categorization, follow-up automation, and resolution tracking.
Vidhayak-Mitra	Legislative Research Agent	Legal database RAG, policy briefs, and question hour prep in regional languages.

Agent	Type	Function
Vikas-Tracker	Fund Management Agent	MPLADS/MLALADS fund tracking, utilization dashboards, bottleneck alerts, and compliance monitoring.
Nagrik-Setu	Constituency Engagement Agent	Social media content generation from completed work, multi-platform publishing, analytics, and constituent communication.

Leveraging India's Bhashini platform – the National Language Translation Mission, providing capabilities for all 22 scheduled languages – Pollity can understand multilingual grievances and route them correctly without requiring citizens to select from 18,000+ subcategories.

4. CUB Discovery & Value Proposition

1) Customer: Elected Representatives (Who Pays)

India's elected representatives operate under an extreme capacity deficit. Each Lok Sabha MP represents approximately 2.5 million constituents — compared to 72,000 per British MP or 761,000 per US Congressional Representative — and receives hundreds of grievances daily, with no systematic management tools. CPGRAMS data shows a 10x increase in grievance volume over the past decade, yet representative offices still run on WhatsApp groups, paper registers, and personal assistants. The result: 43–62% citizen satisfaction, chronic underutilization of funds (\$8–11 billion annually across MPLADS, MLALADS, and ward-level allocations), and a 4.5-year governance gap between elections, with no structured feedback mechanisms. These representatives — MPs, MLAs, municipal councillors, and panchayat leaders — are Pollity's paying customers. They purchase the platform because it directly solves their operational crisis: managing constituent grievances, tracking development funds, coordinating with government agencies, engaging constituencies, and accessing legislative research. Pollity acts as their Digital Chief of Staff, replacing fragmented manual workflows with a unified platform.

2) User: Representative Offices & Staff (Who Uses)

The day-to-day users are representatives themselves and their office staff — personal assistants, constituency managers, and legislative aides — who currently spend 15+ hours weekly on tasks Pollity systematizes. The platform's four agents (Jan-Sunwai for grievance resolution, Vikas-Tracker for fund management, Vidhayak-Mitra for legislative research, and Nagrik-Setu for constituency engagement) are designed for users with varying technical literacy across India's linguistic diversity, with Bhashini integration enabling operation in Hindi, Marathi, Punjabi, Tamil, and other regional languages. Adoption is driven by immediate time savings and measurable efficiency gains, not by top-down IT procurement.

3) Beneficiary: Citizens (Who Benefits)

India's 1.4 billion citizens are the ultimate beneficiaries of Pollity's "*efficiency as equity*" model. When representatives have better tools, the populations who depend most heavily on government services — rural communities awaiting development projects, urban residents navigating grievance systems, marginalized groups seeking scheme access — see the largest improvements. Better-equipped representatives mean faster grievance resolution, more transparent fund utilization, improved agency coordination, and strengthened democratic accountability. When representatives can systematically track, prioritize, and resolve constituent issues, citizens experience a government that actually works. The freemium panchayat tier extends this impact to rural India's 2.5 million+ village heads, ensuring that governance technology reaches the last mile regardless of budget constraints.

Pollity serves India's entire elected representative ecosystem through a tiered approach:

Tier	Count	Monthly Price	Budget Source	Key Needs
MPs	788	\$249 (₹24,999)	₹75K office allowance	Legislative research, media management
MLAs/MLCs	4,550	\$149 (₹14,999)	₹1+ lakh salary	Constituency management, agency coordination

Tier	Count	Monthly Price	Budget Source	Key Needs
Municipal Councillors	85,000+	\$49 (₹4,999)	₹10-50L ward funds	Grievance tracking, project monitoring
Panchayat (Sarpanch)	253,163	Freemium / \$5 (₹499)	₹2-10K honorarium	Basic grievance logging, scheme info

5. Market Opportunity & Market Size:

The global GovTech market is projected to grow from \$606 billion in 2024 to \$1.42 trillion by 2034 (StartUs Insights). India's digital transformation market is estimated at \$124.42 billion in 2025, expected to reach \$267 billion by 2030 at 16.5% CAGR (Mordor Intelligence). India's GovTech sector raised \$97M in H1 2025 alone, a 136.5% increase over the same period in 2024 (Tracxn), signaling accelerating investor confidence in the space.

Total Addressable Market (TAM): \$78.6M (₹723 crore) annually

Pollity's TAM represents full penetration across India's elected representative ecosystem at current pricing:

Tiers	Count	Monthly Price	Annual/User	TAM
Members of Parliament	788	\$249 (₹24,999)	\$2,988	\$2.35M
MLAs (State Legislators)	4,550	\$149 (₹14,999)	\$1,788	\$8.14M
Municipal Councillors	85,000+	\$49 (₹4,999)	\$588	\$49.98M
Panchayat Sarpanch (10% of total)	253,163	Freemium / \$5 (₹499)	\$60	\$15.18M

Tiers	Count	Monthly Price	Annual/User	TAM
village/block-level representatives)				
Total	~343,000			\$78.6M

The market opportunity is validated by I-PAC's ₹209 crore revenue (FY24) serving the same customer base through expensive, non-scalable consulting engagements — confirming willingness to pay among political stakeholders. Pollity addresses this market with no direct competitor offering an integrated governance management platform.

Serviceable Addressable Market (SAM): ~\$1.0M annually — Phase 1 geographies

Pollity's go-to-market is deliberately sequenced, starting with Delhi and Maharashtra. These Phase 1 geographies contain approximately 997 representatives within Pollity's initial target: 70 Delhi MLAs, 250 MCD councillors, 288 Maharashtra MLAs, 227 BMC councillors, and 162 Pune municipal councillors. At current pricing tiers (\$149/month for MLAs, \$49/month for councillors), this Phase 1 beachhead represents approximately \$1.0M in annual addressable revenue.

Serviceable Obtainable Market (SOM): \$94K–\$140K ARR — Pre-Seed horizon (12 months)

Assuming 10–15% penetration within the Phase 1 beachhead during the first year of commercial availability, Pollity targets 100–150 paying representatives, yielding \$94K–\$140K in ARR at a blended average of approximately \$78/month. During the pre-seed beta period specifically, the target is 50 active users generating initial usage data and product validation — the proof points that unlock the Seed round.

Year 3 Target: \$2.57M ARR from 8,250 paying customers plus 75,000+ freemium panchayat users across Phase 1 and Phase 2 geographies. Municipal councillors drive 68.5% of revenue, validating the urban-first strategy.

Funding strategy alignment: \$100K in pre-seed capital builds the MVP and validates with 50 beta users within Phase 1 geographies; the subsequent \$300–500K Seed round scales to 500 paying customers and begins capturing meaningful share of the ~\$1.0M Phase 1 SAM; and Series A expands into the broader \$78.6M TAM through Phase 2 and Phase 3 geographies.

6. Competitive Landscape

No direct competitor offers an integrated governance management platform for elected representatives. Adjacent solutions include:

- 1) **Government portals (CPGRAMS, state systems):** Process-centric, not user-friendly; 18,000+ categories; no mobile-first design.
- 2) **Generic CRM tools (Salesforce, Zoho):** Not purpose-built for governance; lack Indian language support, government portal integration, and political workflow understanding.
- 3) **Political campaign tools (I-PAC, NationBuilder):** Election-focused, not year-round governance; no grievance management or fund tracking.

Pollity's defensible moat lies in deep workflow integration with government systems, multi-language capabilities via Bhashini, and aggregated governance data that creates network effects over time.

7. Unit Economics

All tiers significantly exceed the 3:1 LTV: CAC benchmark, demonstrating strong unit economics.

Metric	MPs	MLAs	Councillors	Panchayat
Monthly Price	\$249	\$149	\$49	\$5
Annual Revenue/User	\$3,000	\$1,800	\$600	\$60
Avg. Customer Lifetime	8.3 years	7.7 years	6.5 years	6 years
LTV	\$24,900	\$13,860	\$3,900	\$360
CAC	\$1,000	\$600	\$200	\$100

Metric	MPs	MLAs	Councillors	Panchayat
LTV: CAC Ratio	24.9:1	23.1:1	19.5:1	3.6:1
CAC Payback	4 months	4 months	4 months	20 months

8. Financial Projections

Year	Customers	ARR (USD)	Market
2027	500	\$470K	Delhi, Maharashtra
2028	3,000	\$1.1M	+ Punjab, UP
2029	8,000	\$2.6M	+ Southern states
2030	25,000	\$7.3M	National

9. Funding Strategy & Use of Funds

Current Stage: Pre-Seed

Pollity is at the idea-to-MVP stage: the founding team is in place, the product is defined and designed, and the website and brand are live – but the platform itself is not yet built. This is squarely pre-seed territory, and the funding strategy below reflects honest stage-appropriate milestones rather than skipping ahead to later rounds.

Pre-Seed: \$100K – Idea to MVP

Pollity seeks \$100,000 in pre-seed capital to build and validate its Minimum Viable Product over 9–12 months. This amount is deliberately lean and reflects the capital-efficient nature of B2B SaaS, where three technical co-founders can build an MVP without large engineering teams.

Why \$100K is the right number:

- 1) **Capital efficiency:** India-based development costs are 60–70% lower than those in the US. With the CTO building in-house, the majority of capital goes directly to infrastructure, tooling, and targeted contractor support rather than salaries.

- 2) **Benchmark-aligned:** Indian SaaS pre-seed rounds typically range from \$10K–\$150K, funded by founders, angels, and early-stage programs (Efficient Capital Labs, 2025). B2B SaaS companies with experienced founders can launch with \$100K–\$500K by keeping teams lean (Growth List, 2026).
- 3) **SNVC-aligned:** The 2026 Edwardson SNVC will award a minimum of \$300,000 across finalist teams. The 2025 SNVC awarded a record \$475,000, with the first-place winner (Exactics) receiving \$135,000. A \$100K ask is realistic within this range and demonstrates fiscal discipline.
- 4) **Analogue precedent:**
 - a) **Govstream.ai** (Seattle, 2024) — raised a \$1.3M pre-seed followed by a \$3.6M seed in 2025. They build permitting technology for local government agencies. Relevant because it's a B2G SaaS platform that started with a narrow government workflow (permitting) and expanded, similar to Pollity, starting with grievance management.
 - b) **Govly** (San Francisco, YC alum) — raised \$3.6M seed, then \$9.5M Series A in 2023, totaling \$13.1M. They build procurement tools for government contractors. Relevant because they proved that a GovTech SaaS platform with long sales cycles can still attract top-tier investors (Insight Partners, YC) by demonstrating clear workflow value.
 - c) **Haqdarshak** (India) — the closest Indian GovTech analogue. Started lean, built a welfare scheme eligibility engine, grew to ₹36.8 crore revenue by FY24. Relevant because it demonstrates that Indian GovTech can achieve meaningful scale with capital-efficient early operations, and it serves a similar constituency (underserved citizens navigating government systems).
- 5) **Allocation of \$100K Pre-Seed:**

Category	Amount	Details
Product Development	\$55K (55%)	Cloud infrastructure (AWS Mumbai); API integrations (CPGRAMS, WhatsApp Business, Bhashini); front-end and back-end development tools; contractor support for specialized modules (e.g., NLP pipeline for Hindi/Marathi grievance classification).

Category	Amount	Details
Beta Acquisition & Validation	\$20K (20%)	On-ground outreach in Delhi and Maharashtra; pilot onboarding for 50 representatives; user research sessions; travel for relationship-building with MLAs and municipal councillors.
Operations & Legal	\$15K (15%)	Company incorporation (India); DPDP Act compliance setup; ISO 27001 initial assessment; basic legal counsel; accounting.
Contingency	\$10K (10%)	Buffer for extended development cycles, additional user testing, or unexpected compliance requirements.

Pre-Seed Success Milestones (sets up Seed round):

- Working on MVP with Jan-Sunwai (grievance management and daily operations management).
- ~50-100 beta users (representatives) actively using the platform in Delhi and Maharashtra
- NPS > 40 from beta cohort, validating product-market fit
- At least 5 documented case studies showing measurable governance improvement
- Initial user engagement data (DAU/MAU, grievances processed, time saved per representative)

Subsequent Funding Rounds

Each subsequent round is unlocked by achieving the milestones of the prior round, with 18–24 months of runway per SaaS best practice:

Stage	Amount	Allocation & Trigger
Seed	\$300–500K	Triggered by: validated MVP, 50+ beta users, NPS > 40. Use: 40% engineering (full agent suite); 30% sales/marketing (scale to 500 paying customers); 20% customer success; 10% ops.

Stage	Amount	Allocation & Trigger
Series A	\$2–3M	Triggered by: 500+ customers, ~\$470K ARR, proven sales motion. Use: 40% engineering; 30% expansion (Punjab/UP); 20% customer success; 10% G&A.
Series B	\$8–10M	Triggered by: 3,000+ customers, \$1M+ ARR, multi-state presence. Use: 35% national expansion; 25% enterprise sales; 20% product; 20% operations.

10. Value Network & Partnership Ecosystem

Pollity's value creation extends beyond the platform through a strategic partnership ecosystem:

- Government Digital Infrastructure:** Integration with India's digital public infrastructure stack – Bhashini (language translation), API Setu (government API gateway), DigiLocker (document verification), and CPGRAMS (grievance system).
- Academic Partnerships:** UChicago network for impact measurement and governance research; potential collaborations with Indian policy institutes (CPR, NIPFP) for evidence-based feature development.
- NGO & Civil Society:** Partnerships with organizations like PRS Legislative Research, ADR (Association for Democratic Reforms), and MyGov for data sharing and citizen engagement.
- Technology Partners:** AWS (India data centers for DPDP Act compliance), WhatsApp Business API for citizen communication, and regional language NLP providers.

11. Operations & Launch Strategy

Geographic Sequencing

- Phase 1 (Months 1–18):** Delhi and Maharashtra. Target MCD (250 councillors), BMC (227), Pune (162), plus 70 Delhi MLAs and 288 Maharashtra MLAs. High digital readiness, concentrated markets.

- **Phase 2 (Months 12–30):** Punjab and Uttar Pradesh. 117 Punjab MLAs, 403 UP MLAs, 17+ municipal corporations.
- **Phase 3 (Months 24–48):** Southern states (Tamil Nadu, Karnataka, Kerala, Telangana, AP) and national MP tier.

Technology Stack

Cloud-native architecture on India-based servers (AWS Mumbai/Hyderabad) for DPDP Act compliance. Multi-language support (Hindi, Marathi, Punjabi, Tamil, etc.). Mobile-first design for field accessibility. Integration with government portals (CPGRAMS, state grievance systems).

Execution: Agile 2-week sprints; remote-first with Delhi hub; NPS tracking and weekly feedback.

Sales Approach: Relationship-based for MPs/MLAs (political network leverage, conference presence, referral programs); digital marketing and party partnerships for Councillors; freemium funnel and NGO partnerships for Panchayat tier.

Onboarding: White-glove implementation for MPs (dedicated success manager, data migration support); self-serve with training for Councillors; community-based training for Panchayat.

Retention: Quarterly business reviews for high-value accounts; in-app engagement tracking; proactive outreach for usage drops; feature releases aligned with election cycles and legislative sessions.

12. Social Impact & Theory of Change

Pollity's social impact is grounded in '*efficiency as equity*': the premise that making governance more efficient is itself an equity intervention, because underserved communities bear the highest cost of bureaucratic failure.

Theory of Change: Better-equipped representatives → faster grievance resolution → increased citizen trust → functioning policy feedback loops → improved governance outcomes → "last mile delivery" of government services.

Development Fund Impact: Representatives collectively manage \$8–11 billion annually (MPLADS ₹3,940cr + MLALADS ₹9,100–13,650cr + Ward Funds ₹21,250–50,000cr + Panchayat ₹35,354cr).

13. Effectiveness Measurement Plan

Following IRIS+/B Corp impact measurement best practices, Pollity tracks 5 core impact KPIs:

Metric	Baseline	Year 3 Target	Measurement
Grievance acknowledgment	3–5 days	<24 hours	Platform analytics
Grievance resolution	21 days	<14 days	Platform analytics
Citizen satisfaction	43–62%	75%+	Beneficiary surveys
Rep time saved	0 hrs/wk	15 hrs/wk	User self-report
Grievances tracked/rep	0	1,000/yr	Platform data

Impact Verification: Annual third-party assessment; academic partnerships (UChicago network) for rigorous evaluation.

14. Risk Analysis & Mitigation

Risk	Prob.	Impact	Mitigation Strategy
Political neutrality breach	Low	Critical	Strict non-partisan policies; serve all parties equally; diverse customer base across the political spectrum
Higher than expected churn	Medium	High	Product stickiness through integrations, engagement features, strong onboarding, and success metrics tracking
Data privacy/security breach	Low	Critical	ISO 27001 certification; India-based servers; DPDP Act compliance; annual security audits

Risk	Prob.	Impact	Mitigation Strategy
Slower market adoption	Medium	Medium	Extended runway planning; focused geography; party-level deal pursuit; freemium funnel
Regulatory changes	Medium	Medium	Proactive compliance; Election Commission engagement; modular architecture for adaptation
Long sales cycles	Medium	High	Bottom-up individual rep adoption; bypass procurement with direct sales
Competition	Medium	Medium	Deep workflow integration moats; first-mover advantage in governance SaaS

15. Intellectual Property

- **Proprietary governance models:** Fine-tuned LLMs trained on Indian governance contexts, legislative procedures, and regional languages.
- **Data moats:** Aggregated grievance patterns, constituency analytics, and governance insights from platform usage.
- **Trademark:** Pollity brand and Ashoka Chakra logo design.
- **Trade secrets:** Integration protocols with government systems, political engagement methodologies.

16. Business Analogues

1. **Haqdarshak:** GovTech platform connecting citizens to welfare schemes. Revenue: ₹15.5 cr (\$1.68M) (FY22) to ₹36.8 cr (\$4M) (FY24). 90%+ revenue from B2B corporate clients. Demonstrates a viable hybrid model and political agnosticism requirement. Impact: 7.6M families, ₹18,800 cr (\$204M) benefits unlocked.
2. **Samagra Governance:** Works with 6 state governments on systemic transformation. Model insight: philanthropic funding bypasses procurement friction. Key learning: state governments and municipal corporations may offer faster traction than individual MPs.
3. **Emerging-market precedents:** Brazil's Colab (citizen engagement app, 2M+ users) and Indonesia's Qlue (smart city platform, 700K+ users) demonstrate GovTech viability in similar democratic contexts.

17. Team

- a) **Manav Mutneja – Co-Founder & CEO:** 7+ years public sector, policy, and legal advisory experience (Sports Authority of India, Ministry of Youth Affairs and Sports, and the Delhi Assembly Research Centre); built an eldercare health-tech social venture, Elcare India (scaled to 0-15 employees across three regions in India in 2021), Current UChicago Harris MPP Graduate Candidate (Tech Policy and Data Analytics); AI Governance; ML training.
- b) **Piyush Zaware – Co-Founder & CTO:** UChicago Harris MPP (Data Analytics); Research Assistant at the Center for the Economics of Human Development working with large-scale panel data (IPUMS-CPS, NLSY79/CNLSY) and applied econometric methods; Research Assistant at UChicago Booth extracting and classifying corporate financial metrics from investor presentations; published Python code for advanced financial modeling on GitHub; former Research Team Lead at Indian Nationalist Congress Party – SharadChandra Pawar. Expertise in data analysis, machine learning, causal inference, and applied economics.
- c) **Noorul Qausain – Co-Founder & Head of Partnerships:** Direct political operations experience: Political Consultant managing 100-member campaign teams, former I-PAC Media Analyst, and Delhi Assembly Research Centre Fellow, where he built digital networks connecting 100,000+ constituents and provided legislative advisory.

All three founders combine deep government experience, political operations expertise, and data science capabilities – building the tool they wished existed inside government.

Key Hires Needed

- **Head of Product:** B2B SaaS experience, ideally in government/civic tech.
- **Head of Sales:** Political relationship expertise, party network access.
- **Senior Full-Stack Engineer:** India government systems integration and regional language processing experience.

18. Progress to Date

- **Platform development:** Comprehensive website developed (pollity.in) with multiple branding iterations; Ashoka Chakra-inspired logo finalized with professional blue palette; complete brand guidelines established; social media assets created.
- **Market research:** Deep competitive analysis completed; pricing validated against market benchmarks; target state representative counts mapped across all four governance tiers.
- **Product definition:** Core feature set defined across six service areas (grievance management, operations support, agency coordination, constituency engagement, research & analysis, public finance); four platform agents designed and documented (Jan-Sunwai, Vidhayak-Mitra, Vikas-Tracker, Nagrik-Setu).
- **Current status:** In product development mode; seeking interested public representatives for beta testing (Q1–Q2 2026).

19. Key Milestones & Timeline

Timeline	Milestone	Success Metric
Q3–Q4 2026	MVP launch; beta testing with 50 representatives in Delhi and Maharashtra	50 beta users, NPS >40
Q1–Q2 2027	Commercial launch; scale across Maharashtra (BMC, Pune, Nagpur) and Delhi; seed funding close (\$300–500K)	500 paying customers
2028	Punjab/UP expansion; first party-level deal; Series A (\$2–3M)	3,000 customers, \$1M ARR
2029	Southern states, MP tier focus, GeM registration	8,000 customers, \$2.5M ARR
2030	National scale; government procurement contracts; Series B (\$8–10M)	25,000+ customers, \$7M+ ARR

20. Long-Run Vision & Competitive Positioning

- **Data Network Effects:** Aggregated grievance patterns create predictive insights that improve with scale.

- **Deep Workflow Integration:** High switching costs – the most defensible B2B moat.
- **Multi-Language Capabilities:** Fine-tuned models for 22 languages via Bhashini datasets.
- **Political Neutrality Brand:** Non-partisan infrastructure trusted by all parties.
- **Exit Pathways:** Strategic acquisition (Salesforce Public Sector, Microsoft Civic); IPO as India's leading GovTech platform; impact fund acquisition.

21. SNVC Ask & Value Proposition

As someone with prior experience of participating in the SNVC, Pollity seeks the Social New Venture Challenge for:

1. **Mentorship:** Booth network to navigate GovTech's long sales cycles and India-specific market entry challenges.
2. **Investor Connections:** Impact investors who understand the Indian governance context and are comfortable with longer GovTech sales timelines.
3. **Credibility:** UChicago affiliation validates the venture to risk-averse political stakeholders and enables academic partnerships for impact measurement.
