A Digital Chief of Staff for India's Elected Representatives

The Problem

India has **3.3 million elected representatives**: MPs, MLAs, municipal councillors, panchayat sarpanchs. Every single one of them is overwhelmed.

Each week, hundreds of constituents reach out with problems: a broken road, a blocked pension, a corrupt official, a child out of school. These grievances arrive through WhatsApp messages, phone calls, in-person visits, and handwritten letters. There is no system to manage any of it.

The result:

- Grievances get lost between intake and resolution
- Citizens hear nothing after they file a complaint
- Representatives cannot answer “how many problems did we solve this month?”
- Staff spend their days forwarding messages and chasing departments, not solving problems

The gap between “resolved on paper” and “actually resolved” is enormous. No one is measuring it.

What We Are Building

Pollity.in is an AI-powered management platform for elected representatives. Think of it as a Digital Chief of Staff that handles the operational complexity of running a constituency office, so the representative can focus on actual governance.

The first module, **Jan-Sunwai**, tackles grievance management:

1. A constituent sends a WhatsApp message describing their problem
2. Our AI instantly classifies it by type (infrastructure, healthcare, corruption, etc.) and urgency
3. The constituent gets an acknowledgement with a unique Reference ID, within seconds
4. The office staff see every grievance on a single dashboard, assigned, tracked, and updated through to resolution
5. The representative gets data: how many grievances came in, how many were resolved, what the biggest issues are

No more lost WhatsApp messages. No more citizens calling back with no answer. No more guessing.

The Bigger Vision

Jan-Sunwai is module one. The full Pollity platform will include:

Module	What It Does
Jan-Sunwai	Grievance management and constituent service
Vidhayak-Mitra	Legislative research: bill summaries, policy analysis, and talking points
Vikas-Tracker	Track constituency development funds, project status, budget utilisation
Nagrik-Setu	Constituent engagement via social media and mass communication

Together, these modules give every elected representative the operational infrastructure that only well-funded national politicians have ever had access to, at a fraction of the cost.

Why It Matters

India's democracy runs on 3.3 million local representatives. Most of them are first-generation politicians with no staff, no systems, and no data. Pollity gives them infrastructure.

When a sarpanch in rural Maharashtra can show her constituency that she resolved 84% of grievances filed last quarter, that is accountability. That is what builds trust between citizens and their government at the grassroots level.

Who We Are

Manav Mutneja	Co-Founder & CEO. Antitrust lawyer and digital governance expert. Leads strategy, partnerships, and stakeholder engagement with government institutions.
Piyush Zaware	Co-Founder & CTO. Computational engineer and econometrician, MPP candidate at University of Chicago Harris. Builds the technical infrastructure and data systems.
Joe DiTommaso	Co-Founder & COO. Technology and management information systems background. Leads product operations, user acquisition, and go-to-market execution.

We are currently building toward a live prototype demo in Spring 2026.

Where We Are Right Now

- ✓ Core product concept validated through customer discovery interviews
- ✓ Jan-Sunwai backend built and deployed (FastAPI on Railway)
- ✓ AI classification pipeline live (Claude Haiku, 8 categories, 4 urgency levels)
- ✓ Grievance dashboard deployed (Streamlit)
- WhatsApp Business API integration in progress
- First beta users targeted post-SNVC (50 offices, Q3 2026)
